

# OUR RANGE OF PROPOLIS

Non-exhaustive list  
CONTACT US

## Our list of propolis extract

Common name	Form	Standardisation
Propolis (brown)	Extract in powder	3-12% Total Polyphenols / 18% propolis extract
	Hydroalcoholic liquid extract	15-38 mg/mL / Ratio 1:10 Total Polyphenols
	Hydroglyceric liquid extract	2-12 mg/mL Total Polyphenols
Propolis (green)	Extract in powder	2.5% Total Phenol acids (artepillin C > 10%)
	Hydroalcoholic liquid extract	on demand
	Hydroglyceric liquid extract	10 mg/mL Total Phenol acids (artépilline C)

## ROLES OF PROPOLIS

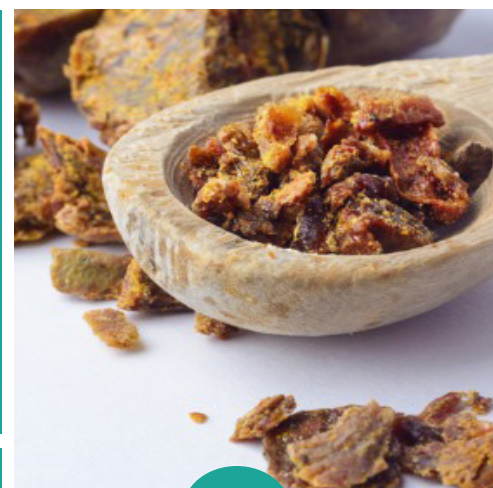

Propolis is the flagship product offered by bees. Indeed, propolis is a unique product from nature, it is the result of a synergy between flora and fauna. Within their hive, bees prevent external infections by spreading with propolis the inside of the hive, preventing the spread of bacteria and fungi harmful to the well-being of the hive and colony.

The benefits and virtues of propolis are multiple: anti-infective, antibiotic, antiviral, powerful antioxidant, etc. Propolis stimulates the immune system

## ADVANTAGES OF OUR RANGE

Our propolis extracts are the result of an innovative process with very differentiated ethanol extraction steps. This process ensures that our propolis extracts contain all the natural actives of the raw material, while making them reproducible, standardized and characterized. The polyphenolic complex remains intact in our extracts, be it flavonoids, their glycosylated fractions or phenolic acids.

Our green propolis contains a unique phenolic acid: artepillin C which has proven through numerous clinical studies its positive impact in strengthening the immune system.

Did you know?

Man has known the benefits of propolis since Antiquity!

The Egyptians used propolis to prevent the decomposition of organs during the mummification process.
